

PureGym

Kirkcaldy

CM Steel Buildings were appointed as main contractor for this well-known fitness brand. CM have carried out many projects for this valued customer over the years and have input directly from the earliest design stages to allow the most suitable products all within the developments budget.

The project was based in Kirkcaldy, Fife. There was a full strip back of the existing structure allowing CM to extend and update the full building envelope with modern cladding.

The extension was tastefully built using the latest of insulated render applications.

The full project was completed in 3 months allowing PureGym's Fit-out contractors to meet their busy roll-out framework.
